

Silicone Tubing

Un-reinforced silicone tubing,

Un-reinforced silicone tubing, with bore sizes from 0.2mm ID up to 200mm, meets the demands of practically any application.

Applications: Manufactured to fine tolerances, the smallest silicone tubing is most commonly used as electrical sleeving, whilst mid-range sizes are generally used to carry fluids and powders within the food processing and pharmaceutical industries. Dielectric tubing and hot air ducting are just two uses for the largest tubes in the range.

Also offered are a wide selection of Water Council and Food and Drug Administration (FDA) approved materials for use specifically within hygiene-critical applications.

Materials: Silicone tube is platinum cured, non-yellowing and is available in translucent 60° shore. Silicone tube is also available to order in any colour including a range of special effect colours.
